

ABSTRACT OF THE DISCLOSURE

5 A suet bird feeder system for efficiently providing suet plugs for birds to
consume. The suet bird feeder system includes a housing unit having at least one
opening with a rear wall and a straight or tapered inner wall, a support member
extending from the rear wall, and a suet plug having a tapered sidewall formed to fit
within the opening. A storage tray preferably has a plurality of storage cavities having
10 a tapered structure for receiving and storing the suet plugs prior to insertion within the
opening.
